STOP

## THE ALTERNATIVE BIMP'AIR CHARGING DEVICE

The Bimp'Air system offers a radical alternative to traditional systems because it is able to harness the energy generated by the bicycle's movement and use it to fill a capsule with compressed air.

Bimp'Air can also offer you another way of refilling your compressed air capsules : Bimp'Air E-Way.

An electrically powered option has been developed. The charger is 12V compatible - suitable for plugging into a cigarette lighter. A special adapter is also available to plug on the 230V main socket.

This charger holds the compressor and capsule and is capable to refill the capsule in just 5 minutes.

It features an indicator to follow the filling of the capsule, as well as an automatic stop as soon as the pressure of the capsule has reached 50 bars.
